*Optimal Performance
Maximum Stability*

*Premium Comfort
Enhanced Mobility*

*Lightweight
Easy In-Game Application*

The Problem:

Ankle injuries keep players out of the game and internal ankle braces do not provide the stability or comfort necessary to return players to the field.

“Internal ankle braces can be uncomfortable, compromise the fit of the shoe, and provide limited inversion/eversion stability.”

– Athletic Trainer

Competitive Matrix

PRODUCT	COMFORT	INVERSION/EVERSION STABILITY	WEIGHT	PERFORMANCE	OWN SHOE/ORTHOTIC	IN-GAME APPLICATION	PROTECTION FOR RECOVERING ANKLE
INTERNAL ANKLE BRACE	LOW	LOW	LIGHT	MEDIUM	MAY REQUIRE LARGER SHOE, ORTHOTIC LIMITED	CHALLENGING, OFTEN REQUIRES DIFFERENT SHOE	LIMITED

Use Cases

BEFORE TayCo	WITH TayCo
Running back suffers non-operative high ankle sprain, unable to practice or play for 5-6 weeks.	Running back suffers high ankle sprain, able to practice/play in 3-4 weeks with TayCo.
Offensive tackle suffers ankle sprain in game. Player not able to return for 3 series as internal ankle brace required larger shoe. Player ineffective upon return.	Offensive tackle suffers ankle sprain in game. Player is able to return the next series with spatted TayCo. Player is confident and effective.
Team has limited offensive and defensive line depth. Coaches choose not to practice with certain drills due to risk of ankle injuries.	Team has limited offensive and defensive line depth. Players wear TayCo prophylactically and coaches engage players in all practice drills.

TESTIMONIALS

“[TayCo] is a very popular choice for our players for stability. What it does more than anything else is it gets you back on the field moving. It’s been really amazing what that brace has been allowing our players to do quickly. [Running back] had a high-ankle sprain and came back (after a week off). He was not 100 percent last week, but I’ve seen high-ankle sprains that are four weeks (out of action), and he practiced pretty hard last week with that brace on. And that’s the first time I’ve seen something like that before.” **Brian Kelly, Head Coach, Notre Dame Football** South Bend Tribune, Oct. 3, 2017

“The TayCo Ankle Brace has been one of the most effective new products I have ever implemented at FSU. It is extremely beneficial to our football players with chronic ankle issues and it also has become the first option for support for many of the acute ankle injuries that arise during the season. Our players love the fit of the brace and are very receptive to wearing it.” **Jake Pfeil, Head Athletic Trainer, Florida State**

“We outfitted 8 offensive linemen prophylactically, and sustained 0 high-ankle sprains the remainder of the season and compliance among the players was very good. Our entire Sports Medicine staff and Team Physicians were extremely excited about our results and will definitely be incorporating the braces into our treatment and prophylactic bracing plans.” **Matt Thomason – Head Athletic Trainer, Kansas State**
