

TESTIMONIALS

"The TayCo Ankle Brace has been one of the most effective new products I have ever implemented at FSU. It is extremely beneficial to our football players with chronic ankle issues and it also has become the first option for support for many of the acute ankle injuries that arise during the season. Our players love the fit of the brace and are very receptive to wearing it."

Jake Brown – Head Athletic Trainer, Florida State University

"We found great success this year using the TayCo Ankle Brace on both linemen and skill positions. Our athletes liked the extra support in a light weight brace that did not impact the integrity of their cleats."

Justin Smith – Head Athletic Trainer, North Carolina State

"We outfitted 8 offensive linemen prophylactically, and sustained 0 high-ankles sprains the remainder of the season and compliance among the players was very good. Our entire Sports Medicine staff and Team Physicians were extremely excited about our results and will definitely be incorporating the braces into our treatment and prophylactic bracing plans."

Matt Thomason – Head Athletic Trainer, Kansas State

"[TayCo] is a very popular choice for our players for stability. What it does more than anything else is it gets you back on the field moving. It's been really amazing what that brace has been allowing our players to do quickly. [Running back] had a high-ankle sprain and came back (after a week off). He was not 100 percent last week, but I've seen high-ankle sprains that are four weeks (out of action), and he practiced pretty hard last week with that brace on. And that's the first time I've seen something like that before."

Brian Kelly – Head Coach, Notre Dame Football
South Bend Tribune, October 3, 2017

"TayCo Brace gave me the stability and peace of mind to return to play. TayCo is a revolutionary product for acute ankle injuries."

TayCo External Athletic Brace

The ONLY In-Game Solution for Ankle Injuries

THE PROBLEM

Ankle injuries keep players out of the game, and internal ankle braces do not provide the stability or comfort necessary to return players to the field.

“Internal ankle braces can be uncomfortable, compromise the fit of the shoe, and provide limited inversion/eversion stability.”

Athletic Trainer

“Internal ankle braces do not provide the protection necessary to engage in all preferred drills, especially when we are thin at certain positions.”

Football Coach

Competitive Matrix

PRODUCT	COMFORT	INVERSION/EVERSION STABILITY	WEIGHT	PERFORMANCE	OWN SHOE/ORTHOTIC	IN-GAME APPLICATION	PROTECTION FOR RECOVERING ANKLE
